

Learning about

Microscopes

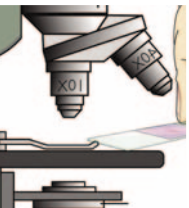

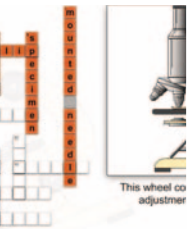

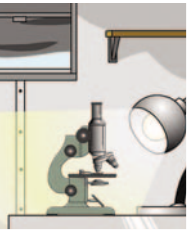

QCA Scheme of Work: Science (7) - Cells: The body's building blocks
Applied Science GCSE Unit 1 - Developing Scientific Skills

USING MICROSCOPES AND PREPARING SLIDES

- Made By teachers
for teachers
- Engaging animations
- Printable worksheets
- Interactive whiteboard ready

Learning about Microscopes provides an easy to use method of demonstrating and reviewing the use of microscopes and making up specimen slides in the school laboratory. Learning about Microscopes has six activities starting with building and using a microscope, making up a microscope slide, recording observations, a 'quiz' and a final EduPuzzles Crossword Puzzle. Learning about Microscopes has two versions, one prepared for individual pupil use, and the other for teacher instructional use on interactive whiteboards. Both versions have the same learning sequence and graphics so they directly correlate with each other. Take a closer look at a microscope!
